Acne is a very common skin condition characterised by comedones, blackheads and whiteheads, and pus filled spots. It usually starts at puberty and varies in severity from a few spots on the face, neck, back, and chest which most adolescents develop in their mid to late 20s. It is not caused by bacteria although bacteria play a role in its development. It is not unusual for some women to develop acne during puberty. Some suggests that what you eat can worsen or help acne. Fighting acne with food can what you eat worsen or help acne.
